

Om Shree

Bangalore, IN | om22shree@gmail.com | +91 8360195490 | omshree.space

Summary

Cloud Platform Engineer specializing in large-scale distributed systems and event streaming architectures. Adept with Kubernetes, AWS infrastructure automation, and high-availability system design with proven track record in production environments. Capable of scaling up teams and improving operational tempo.

Technical Skills

Cloud Infrastructure - AWS (EC2, EBS, S3, Route53, Lambda), Kubernetes, Docker, Terraform, Multi-region Cell-based architecture

DevOps Automation - ArgoCD, GitHub Actions, Helm, GitOps, CI/CD Pipelines, Infrastructure as Code

Event Streaming - Kafka, StreamNative Pulsar, Airflow, KEDA Autoscaling

Monitoring and Security - Grafana, ELK Stack, OpenTelemetry, Istio, mTLS, PCI-DSS, Wiz Security

Programming - Python, Go, Bash, Boto3, FastAPI

Experience

Cloud Engineer I June 2023 – Present

Global Platform Capabilities, FICO

Bangalore, IN

- Participated in **incident response calls** alongside staff engineers, architects and VP-level executives, contributed to **team scaling from 3 to 9 engineers**, led induction and technical on-boarding for 6 senior engineers with 10+ years of experience each
- Automated deployment of **30+ Pulsar clusters** using Kubernetes, Helm, and ArgoCD, reducing deployment time from 45+ minutes to **under 3 minutes**; implemented **KEDA autoscaling** to reduce disruptions by 60%; implemented **strong CP** setup; implemented **ELK stack** for observability and alerting
- Optimized **10+ Kafka clusters** to maintain **99.99% availability, 200ms SLA, and 500K+ TPS**; identified optimizations delivering **\$600K+ in annual savings**
- Provided **24/7 on-call** support for production Pulsar, Kafka, Route53, and DAPR services; improved MTTR significantly, **trained L1 support teams and established an escalation hierarchy**
- Built multi-region AWS account life-cycle automation using Terraform to manage **100+ AWS accounts** linked to AWS Org; migrated CI/CD pipelines from BitBucket-Jenkins to **GitHub workflows** with zero downtime
- Participated in **PCI-DSS** compliance audits for cloud infrastructure and deployed **Wiz** security platform across the organization
- Led, designed and deployed **core DNS infrastructure** using AWS Route53 resolvers, endpoints and Terraform; **consumed by all NorthStar products at FICO**

Key Projects

Core DNS Infrastructure – FICO Proprietary

- Designed cross-account multi-region DNS mesh for hundreds of Route53 hosted zones and VPCs using Terraform and AWS ([architecture blog](#))
- Forms the foundational infrastructure for FICO's cell-based architecture enabling secure inter-service communication between every NorthStar product ([reference blog](#))

DAPR & Gloo Gateway Integration – FICO Proprietary

- Automated deployment of DAPR control plane to 30+ EKS clusters with automated sidecar injection and configuration management ([implementation blog](#))
- Integrated with Gloo Gateway for cross-cluster connectivity and secure service mesh capabilities ([technical blog](#))

Airflow Transaction Analyzer – [GitHub](#)

- Built an end-to-end Airflow orchestration pipeline using Python and Kubernetes workers for analysis of 100K+ TPS; generates a correlation score for fraud detection
- Developed a front-end application using FastAPI to visualize fraud results
- Developed a custom data-ingestion service using Go channels to feed real-time transactions at a rate of 100K TPS to the detection model; implemented ELK observability; orchestrated on Kubernetes; KEDA horizontal autoscaling

Certifications

Certified Kubernetes Application Developer (**CKAD**) - Linux Foundation | [GitOps Enterprise L-3](#) - Codefresh | [System Design](#) - Coding Ninjas | [Deep Learning Specialization](#) - Andrew Ng

Education

Bachelor of Technology in Information Technology

KIIT University, Bhubaneswar

2020 – 2024

CGPA: 9.2/10
