Platform Engineer focused on **Kubernetes**, **Terraform**, **AWS** and **streaming** infrastructure

Experience

FICO | Global Platform Capabilities

Cloud Engineer 1 | Jun 2025 – Present

- Designed and implemented the **central DNS mesh** powering production **cell-based architecture** using **Terraform**, **Route 53**, **AWS Lambda**, and VPC associations across multi-region, multi-account AWS environments.
- Led production incident response** for **Pulsar**, **Kafka**, **Dapr**, **Route 53** services across multi-region environments, collaborating with Staff Engineers, Architects and senior leadership to resolve critical **core infrastructure outages**.
- Developed an **MCP** server for the team to aggregate context across **Jira**, **Confluence**, **Bitbucket** and **GitHub** to provide team-specific incident resolution steps and **RCA** reports.

Cloud Engineer Associate | Jun 2024 – Jun 2025

- Optimized 10+ **Kafka EC2** clusters for **500K+ TPS**, **200ms SLA**, and **99.9% availability**, contributing to **\$600K+ in annual savings**.
- Migrated Pulsar and Dapr from **Istio** sidecars to **Gloo mesh** and implemented platform observability for **Kubernetes** workloads using **OpenTelemetry**, **Prometheus** and **Grafana**.
- Supported **technical on-boarding** for 6 senior engineers and 1 intern; Led **handover** and **trained** L1 infrastructure support teams.
- Built and orchestrated **DAGs** using **Kubernetes CRDs** for **function-mesh**.
- Architected the deployment of **Pulsar platform** across **30+ EKS** clusters using **ArgoCD**, **Helm**, and **GitHub Actions**, reducing rollout time by 60%.

Cloud Engineer Intern | Jun 2023 – Jun 2024

- Built **Terraform** modules to standardize infrastructure deployments using **Jenkins** across **100+ AWS accounts** and multiple regions as per **shared services architecture**. Migrating away from legacy mutable **Ansible** infrastructure.
- Integrated **Wiz** into **AWS** infrastructure and participated in **audit** assessments for **GDPR**, **PCI-DSS**, **CSA STAR Level 2**, and **CCPA** frameworks.
- Managed core **AWS organization** and implemented centralized **SCPs** through **Terraform**; Centralized container vulnerability scanning using shared **GitHub Actions** leveraging **Aqua**.
- Member of the **DevSecOps** team, provided cross-team **L3 migration support** and served as **cloud infrastructure SPOC** for cybersecurity.

Projects and Case Studies

EC2 and JVM tuning for stream systems | 2024

- Trade-off analysis and **kernel FS** tuning for **EC2 Linux** customized for event streaming systems.
- Analysis and optimizations around **JVM GC** and Heap memory for streaming systems.

Core DNS mesh architecture on AWS | 2025

- Design and **architecture document** to build a centralized DNS mesh powering production workloads across multi-account and multi-region AWS environments using **Route53**.

Pulsar Hammer | 2025

- High-throughput, agent-first, multi-threaded Go app built to stress test pulsar clusters using gRPC.

Education and Certifications

GitOps Enterprise Level 3, Codefresh, issued 2025

CKAD, Linux Foundation, issued 2024

B.Tech in Information Technology, SCE, KIIT University, 2020 – 2024

- 9.2 CGPA**
- Coursework includes **DSA**, **OOP**, **DBMS**, **COA**, **ML**, **Algorithm design** and **Networking**.
