

Om Shree

📍 Bangalore, IN ✉ om22shree@gmail.com ☎ 91 8360195490 🔗 omshree.space

Cloud Platform Engineer with 2 years of experience working in strict SLA environments at a major fintech analytics firm. Interested in AWS, GitOps, Kubernetes, and event streaming at scale.

Education

KIIT University, Bhubaneswar

BTech in Information Technology

Sept 2020 – June 2024

- CGPA: **9.2/10** ([engineering semester mark-sheets](#) 🔗)
- **Coursework:** Algorithm Design, Networking, OS, DBMS and ML

Experience

Cloud Engineer 1

Global Platform Capabilities, FICO

Bangalore, IN

June 2023 – Present

- Automated 30+ **Pulsar** clusters using **Kubernetes, Helm, ArgoCD, and Istio strict mTLS**, deployment time less than 3 min, implemented autoscaling using **KEDA and Prometheus**, reduced disruption time by 60%
- Optimized **Kafka** clusters with **ELK Stack and Grafana**, ensuring 99.99% uptime, **on-call support** for 200ms SLA and 10m MTTR with combined uninterrupted transaction volume north of 20K TPS, **cost-optimizations** north of \$100K per year in **EC2 and EBS**
- Implemented life-cycle automation for 100+ AWS accounts using **Terraform, Boto3 and GitHub actions**
- Participated in **PCI-DSS** attestation for cloud infrastructure, trained for **CCPA, IT Act, GDPR and CSA STAR L-2** compliant infrastructure
- **Promotions:** from intern to associate to CE-1 in a span of 2 years

Certifications & Awards

Certified Kubernetes Application Developer – Linux Foundation 🔗

GitOps Enterprise L-3 – Codefresh 🔗

System Design – Coding Ninjas 🔗

Multiple **spot awards** akin to performance incentives throughout my tenure at FICO

Projects

Core DNS infrastructure

FICO - Internal

- Automated cross-account associations between 100s of **Route53 profiles, hosted zones**, and VPCs in ephemeral dynamic environments using **Crossplane, AWS lambda functions, and GitHub actions**
- Forms the underlying infrastructure for **cell-based architecture** empowering all north-star products at FICO

DAPR deployment and integration with Gloo gateway

FICO - Internal

- Deployed DAPR control plane to 30+ **EKS** clusters with helm and GH workflows, follows **sidecar injection** pattern using **mutating webhook**. Abstracts pub-sub API functionality by connecting to Pulsar
- Integrated with gloo gateway to facilitate east-west and north-south connectivity without changing broker URL at component level

Airflow Transaction Analyzer

GitHub repository 🔗

- Built a transaction analysis pipeline to process 1M+ records and establish a correlation matrix to facilitate fraud detection ML models using **python operator** and **Apache Airflow**
- Integrated the pipeline to an open-source fraud detection model to generate potential score using **AWS S3** and **regression trees**, developed a front-end using **Streamlit** to visualize these results

eBPF network packet transfer accelerator

GitHub repository 🔗

- Accelerates packet transfer using a **bypass of the loopback interface** provided by the Linux kernel TCP/IP stack, simulates **direct memory access** between 2 ports to reduce networking overhead
- Tools used: **Go, bash, and eBPF Sockops**
