Cloud Platform Engineer with 2 years of experience working in strict SLA environments at a major fintech analytics firm. Interested in AWS, GitOps, Kubernetes, and event streaming at scale.

## Experience

### Cloud Engineer 1

Global Platform Capabilities, FICO

Bangalore, IN

June 2023 – Present

- Automated deployment of 30+ StreamNative **Pulsar** clusters into **dynamic targets** using **Kubernetes, Helm, ArgoCD, Kustomize, and Istio strict mTLS**, reduced deployment time to less than 3 mins
- Implemented pulsar autoscaling using **KEDA and OpenTelemetry**, reduced disruption time by 60%
- Optimized **Kafka** clusters for 99.99% availability, 200ms SLA & 500K+ TPS using HA active-active setup
- On-call support**, Kafka **cost-optimizations** north of \$600K per year in **EC2 and EBS**, enhanced observability using **ELK Stack and Grafana**
- Implemented **multi-region** life-cycle automation for 100+ AWS accounts using **Terraform, Boto3 and GitHub actions**, enhanced and migrated existing automation stack from BitBucket-Jenkins to GH actions with 0 downtime
- Represented cloud infrastructure for **PCI-DSS** attestation, trained for **CCPA, IT Act, GDPR and CSA STAR L-2** compliance, implemented cross-account **Wiz** infrastructure for threat detection using **Terraform**
- Promotions:** from intern to associate to CE-1 in a span of 2 years

## Certifications

[Certified Kubernetes Application Developer – Linux Foundation](#) [↗](#)

[GitOps Enterprise L-3 – Codefresh](#) [↗](#)

[System Design – Coding Ninjas](#) [↗](#)

## Projects

### Core DNS infrastructure

FICO - Internal

- Designed and led cross-account associations between 100s of **Route53 profiles, hosted zones**, and VPCs in ephemeral dynamic environments using **Crossplane, AWS lambda functions, and GitHub actions**
- Forms the underlying infrastructure for **cell-based architecture** empowering all north-star products at FICO

### DAPR deployment and integration with Gloo gateway

FICO - Internal

- Deployed DAPR control plane to 30+ **EKS** clusters with helm and GH workflows, follows **sidecar injection** pattern using **mutating webhook**. Abstracts pub-sub API functionality by connecting to Pulsar
- Integrated with gloo gateway for cross-cluster connectivity without changing broker URL at component level

### Airflow Transaction Analyzer

[GitHub repository](#) [↗](#)

- Built a transaction analysis pipeline to process 1M+ records and establish a correlation matrix to feed fraud detection ML models using **python operator** and **Apache Airflow**
- Integrated the pipeline to an open-source fraud detection model to generate potential score using **AWS S3** and **regression trees**, developed a front-end using **Streamlit** to visualize these results

### eBPF network packet transfer accelerator

[GitHub repository](#) [↗](#)

- Accelerates packet transfer using a **bypass of the loopback interface** provided by Linux kernel TCP/IP stack, simulates **direct memory access** between 2 ports reducing network overhead
- Tools used: **Go, bash, and eBPF Sockops**

## Education

### KIIT University, Bhubaneswar

BTech in Information Technology

Sept 2020 – June 2024

- CGPA: **9.2/10** ([engineering semester mark-sheets](#) [↗](#))
- Coursework:** Algorithm Design, Networking, OS, DBMS and ML
