Platform Engineer focused on **Kubernetes**, **Terraform**, **AWS** and **streaming** infrastructure

Experience

FICO | Global Platform Capabilities

Cloud Engineer 1 | Jul 2025 – Present

- Designed the **central DNS mesh** powering production and non-production workloads across multi-account, multi-region **AWS** environments using **Terraform**, **Route 53**, **AWS Lambda**, and VPC associations for **cell-based architecture**
- Supported **SRE/PRE** incidents across production **Pulsar**, **Kafka**, **Route 53** and **Dapr** services in a **12/7 on-call** model alongside staff engineers, architects and VP leadership
- Developed an **MCP** server for the team to aggregate context across **Jira**, **Confluence**, **Bitbucket** and **GitHub** to provide team-specific incident resolution steps and **RCA** reports
- Conducted **POC** and **feasibility study** for org-wide adoption of **AWS DevOps agent**

Cloud Engineer Associate | Jul 2024 – Jun 2025

- Optimized 10+ **Kafka EC2** clusters for **500K+ TPS**, **200ms SLA**, and **99.9% availability**, contributing to **\$600K+ in annual savings**
- Migrated Pulsar and Dapr from **Istio** sidecars to **Gloo mesh** and implemented platform observability for **Kubernetes** workloads using **OpenTelemetry**, **Prometheus** and **Grafana**
- Supported **technical on-boarding** for 6 senior engineers; Led **handover** and **trained** L1 infrastructure support teams
- Built and orchestrated **DAGs** using **Kubernetes CRDs** for **function-mesh**
- Built and automated deployment of **Pulsar platform** across 30+ **EKS** clusters using **ArgoCD**, **Helm**, and **GitHub Actions**, reducing rollout time from 45+ minutes to under 3 minutes

Cloud Engineer Intern | Jun 2023 – Jun 2024

- Built **Terraform** modules to standardize infrastructure deployment across 100+ **AWS** accounts and multiple regions as per **shared services architecture**
- Integrated **Wiz** into **AWS** infrastructure and participated in **audit** assessments for **GDPR**, **PCI-DSS**, **CSA STAR Level 2**, and **CCPA** frameworks
- Managed core **AWS organization** and implemented centralized **SCPs** through **Terraform**; Centralized container vulnerability scanning using shared **GitHub Actions** leveraging **Aqua**
- Member of the **DevSecOps** team, provided cross-team **L3 migration support** and served as **cloud infrastructure SPOC** for cybersecurity

Projects and Case Studies

EC2 and JVM tuning for stream systems | [visit docs or code](#) | 2024

- Trade-off analysis and kernel FS tuning for EC2 Linux customized for event streaming systems
- Analysis and optimizations around JVM GC and Heap memory for streaming systems

Core DNS mesh architecture on AWS | [visit docs or code](#) | 2025

- Design and architecture document to build a centralized DNS mesh powering production workloads across multi-account and multi-region AWS environments

Pulsar Hammer | [visit docs or code](#) | 2025

- High-throughput, agent-first, multi-threaded Go app built to stress test pulsar clusters using gRPC

Education and Certifications

GitOps Enterprise Level 3, Codefresh, issued 2025

CKAD, Linux Foundation, issued 2024

B.Tech in Information Technology, SCE, KIIT University, 2020 - 2024

- 9.2 CGPA
- Coursework includes DSA, OOP, DBMS, COA, ML, Algorithm design and Networking
